

ABSTRACT OF THE DISCLOSURE

Embodiments of the present invention are directed to a method and apparatus for verifying review and comprehension of information. In one embodiment of the present invention, a verification system is used to verify that an information consumer attentively reviews provided information. In one embodiment, an incentive to review and comprehend information is provided for an information consumer. However, the review must be verified for the incentive to be given. In one embodiment, review verification is accomplished by introducing a series of signifiers into the provided information. In one embodiment, the information consumer is provided with instructions for indicating, directly or indirectly, the consumer's knowledge of the signifiers. In one embodiment, the user must indicate knowledge of a certain number of indicators to receive the incentive.
